

thresholds of mechanical nociception of wild type C57BL/6JNarl mice. Nociceptive threshold was determined when the tested mouse showed paw withdrawal response upon the electronic von Frey stimulation. There was no significant difference between left paw (1.1 ± 0.04 g, black bar) and right paw (0.9 ± 0.04 g, white bar). Data are mean \pm SE. (n=10).
